Annotated Bibliography

Michikyan, Minas. "Adolescent Media and Social Media use." *Journal of adolescent research*. Sage Journal, April 27 2016, Pg. 411-414

This source is vital to the project three because it thoroughly introduces the problems teenagers face due to social media. It is also a good choice for remediation because it can be shown in an infographic with a lot of relative pictures. These pictures would show how one of the problems faced by teenagers is that social media and the internet pose too many distractions.

Schurigin O'Keeffe, Gwenn. "The Impact of Social Media on Children, Adolescents, and Families." *American Academy of Pediatrics*. American Academy of Pediatrics, April 01, 2011, Pediatrics, April 2011, Volume 127 / Issue 4.

This article provides a mass amount of information relating to my topic research question. This article provides the information along with factual information from experiments and case studies. One of the terms that was introduced to me in this article is "Facebook depression". I could show this source in my mode by having an infographic and using pictures of Facebook and depression.

Lenhart, Amanda. "Social Media & Mobile Internet Use among Teens and Young Adults. Millennials" *Pew Internet & American Life Project*. Numerical/Quantitative Data; Reports – Research, 2010-Feb-3, Washington, DC 20036

This article starts off extremely strong by providing lists of statistics and proved experiments. The research article then goes into a factual description of each statistic listed as well as providing a logical explanation to each statistic. I could portray this article in my video by talking about how the research relates to the results in a statistical way and the video is good because it allows me to fully explain the statistics.

Dr Valkenburg, Patti M. Jochen Peter, and Alexander P. Schouten. *CyberPsychology & Behavior*. October 2006, 9(5): 584-590.

The aim of the research article's study was to investigate the consequences of friend networking sites for adolescents' self-esteem and well-being. In their survey they collected and surveyed eight hundred and eighty-one people who had a profile on an online friend website.. I could show this article in my Wix website because it shows how self-esteem relates to child development.

Barker Alerie. *CyberPsychology & Behavior*. April 2009, 12(2): 209-213.

A few important findings that I saw in this article is that females are at a higher chance of being vulnerable to the decrease of social acceptance and wellbeing. With the cause of this finding being unknown instead only factual evidence from case studies provides the reasoning. This article can be shown in my video and the video will benefit the article because it will allow me to better describe the results found in the experiment
